

COMSOL Accessibility Statement

COMSOL strives to be the premier developer and provider of scientific simulation software for engineers and scientists in leading technical enterprises, research labs, and universities. We encourage our staff to provide continual innovation and improvements to our products and services through maintaining a corporate culture that is inventive and cutting edge. Based on the latest and preeminent technology and research, we use best practices in software development to provide robust, easy-to-use, and intuitive simulation technology.

COMSOL is committed to providing software that is accessible to the widest possible audience, regardless of technology or ability. We are actively working to increase usability of our software and, in doing so, adhere to many of the available standards and guidelines for user interface design and accessibility. This accessibility is more specifically addressed in our Voluntary Product Accessibility Template® (VPAT®).

Whilst COMSOL strives to adhere to the accepted guidelines and standards for accessibility and usability, it is not always possible to do so for the type of 3D computer-aided engineering software that COMSOL Multiphysics® represents. We are continually seeking out solutions that will make additional aspects of the user interface accessible. In the meantime, should you experience any difficulty in using COMSOL Multiphysics, please do not hesitate to contact us.
